MAGNA-TEK™

PRE-CATALYZED TINT-BASE & TOPCOAT

MAGNA-TEK is a next generation coating in a long line of outstanding pre-catalyzed lacquers from M.L. Campbell®. Engineered to achieve high-quality performance, productivity and appearance, MAGNA-TEK's alkyd-amino hybrid formulation ensures the natural beauty, clarity and durability is achieved with every sprayed piece.

MAGNA-TEK is a HAPs-free, self-sealing pre-catalyzed lacquer coating formulated to transform the way conventional lacquer coatings operate. With performance characteristics similar to that of a conversion varnish, MAGNA-TEK provides excellent adhesion, outstanding durability, and superior moisture resistance. In addition, MAGNA-TEK is formulated to provide a high film thickness per coat, resulting in outstanding film build. This allows for maximum coverage of open-pore wood species and improved productivity, while consuming less material.

MAGNA-TEK was developed with premium performance in mind, so it meets the needs of multiple industry applications, such as kitchen cabinets, commercial and residential furniture.

MAGNA-TEK Pre-Catalyzed Tint-Base & Topcoat

Improved productivity and throughput due to reduced cure time

High-quality formulation with a 60-day shelf life

Improved color stability resulting in an elegant final finish

PFAS/Phthalate-Free

Advantages for Woodworking Professionals

ADVANCED CLARITY AND STABILITY

Allowing for consistent and repeatable product quality

OUTSTANDING LONGEVITY

Tested against KCMA/AWI requirements for durability

ENHANCED APPEARANCE

Offering fantastic slip and feel while reducing the need for unnecessary sanding
